# EMERGENCY LIGHTING

**Is your building safe?** Has it been tested and inspected correctly? Could everyone find their way quickly out of the building during a power loss or an emergency such as a fire? Fire and smoke cause serious injury, severe damage, and worse, loss of life. It is crucial for your building to have adequate emergency lighting per-code that stays illuminated for the required duration for the occupants to exit safely.

We have provided fire protection services in Canada for over 100 years! We offer protection in all types of projects such as residential, commercial, and industrial. For example, hotels, offices, retail, care facilities, schools, apartments, mills, mines, camps, oil and gas facilities, factories, and many more!

Are you looking to bring your building up to the current building code? Does your building meet fire code or life safety code? The green running man symbol is now the required standard for exit lighting in new and renovated buildings. We supply a full line of emergency lighting products for any building.

Time to upgrade? Call us for more information on any LED options, emergency lighting and exit signage! Choose us for all of your emergency lighting and life safety needs.

## Did you know...

Emergency lighting is required by law in most jurisdictions. Standards like NFPA 101 (Life Safety Code), Fire Code, and building codes specify placement, duration, and lumen requirements for emergency lights.

Emergency lighting provides illumination during power outages, fires, or other emergencies, guiding occupants safely out of a building. It is a critical safety feature in commercial, industrial, and residential buildings.

Lights must illuminate exits, stairways, hallways, and paths of egress. They should also light up high-risk areas like fire panels, first aid stations, and evacuation maps.

**Life is priceless.** The cost of a proper inspection and building life safety upgrades could be a lot less than you think! We can help protect you, your clients, your assets, and your investment.

## COMPLIMENTARY SERVICES

Everguard Fire Safety's range of complimentary services support our core offerings, ensuring comprehensive safety and compliance. Services include:

- **Fire Risk Assessments** to evaluate fire hazards in a facility and provide recommendations to improve fire safety and ensure compliance with local fire codes and regulations.
- **Fire Safety Training** for proper use of fire extinguishers and fire suppression systems.
- **System Inspections and Testing** for fire extinguishers, alarms, suppression systems, smoke detectors, sprinklers, and emergency lighting.
- **Consultations** on-site to determine fire protection needs.
- **Maintenance Reminders** for upcoming inspections, testing, or maintenance schedules.
- **Design and Layout Advice** for placing fire safety equipment.
- **Customer Support** 24/7 emergency assistance for urgent issues.
